

Construction Manager

THE ROLE:

Reporting to the Project Execution Director, the **Construction Manager** is responsible for construction planning and contracting strategy development while working closely with the Project Team to ensure safe and cost-efficient constructible designs throughout the engineering and procurement phases of the Wheeler River Project. Throughout the construction phase, this *site-based role* is responsible for the safe and efficient organization of site activities against key performance indicators (KPIs) and ensuring compliance with environmental and license permits, health and safety regulations, and adherence to approved budgets and schedules.

OUR IDEAL CANDIDATE:

You have broad technical knowledge and progressively complex site-based construction experience with a solid track record of delivering results. Having past experience leading teams of employees and contractors, you influence others to achieve results through methodical planning and execution strategies, proactive and collaborative communication tactics, and a strong commitment to safe work practices that contribute to a highly effective and engaged workplace. Additional qualifications and attributes include:

- Bachelor's degree in engineering or relevant technical field; or college diploma or skilled tradesperson with relevant experience will be considered.
- Minimum of 10 years' construction management experience in industrial/mining industry, with 5 years in leadership.
- Proven ability to deliver large projects efficiently and safely with strong project management skills.
- Demonstrated familiarity with project lifecycle including engineering, procurement, construction, and commissioning phases, and ability to interpret blueprints, codes, and regulations.
- Sound analytical thinking and problem-solving skills and a continuous improvement-oriented mindset.
- Strong leadership, teamwork, collaboration, and negotiation skills to effectively achieve results through others.
- Proficiency in Office Suite is required, and SAP/ERP software is an asset.
- Excellent communication skills to communicate information and convey performance expectations effectively across all levels of stakeholders.
- Demonstrated proficiency in managing daily tasks and longer-term activities against deadlines, safety requirements, and quality standards.
- Strong interpersonal skills to engage, influence and build solid working relationships with peers, co-workers, employees, vendors, contractors, and other stakeholders.
- Experience or familiarity with uranium mining and processing is an asset.
- Ability to perform computer-based duties within an office environment.
- Willingness and ability to travel to and work on site at the remote Wheeler River site with increasing frequency and duration as the project progresses.
- Ability to wear and use personal protective equipment (PPE) as required and assigned.
- Must possess a valid Driver's License to drive to site as required.

YOUR RESPONSIBILITIES:

- Provide site-based construction planning and execution expertise to the Project Director for the development and execution of contracting strategy, standards, processes, and plans to ensure cost effective, efficient, safe, and timely project completion.
- Complete broadly defined and technically complex assignments during the engineering phase of the project and thereafter manage on-site the construction lifecycle end-to-end to achieve strategic business and organizational objectives.
- Prepare detailed plans for site works and the coordination of contractors and employees to safely execute activities, meet deadlines and ensure quality and conformance with plans, specs and building codes, and maintain accurate records of approved variations from design drawings or specifications.
- Lead by example and with visible site presence commitment to the safe execution of all construction activities, ensuring a clean, safe, and organized work site is maintained and all health, safety and environmental rules and procedures are known, understood, and adhered to by both employees and contractors.
- Collaborate with and provide constructability support to the Project team to ensure Project development and delivery activities achieve the scope, cost, schedule, quality, and value requirements.
- Develop and foster cooperative relationships with key vendors and service providers.
- Lead construction risk evaluations with the appropriate parties present for relevant and high-quality output.
- Serve as an advisor and mentor to other technical personnel on construction methods, interpretation of codes and standards applicable to construction, health and safety or environmental protection.

- Interpret building plans, regulations, and codes to direct the progress of work and monitor compliance with construction documents.
- Collaborate with the environment, health, safety, supply chain, and regulatory teams to ensure compliance with established company protocols and policies, applicable legislative and regulatory requirements, and licensing commitments.
- Perform other duties as assigned.

This role is being offered as a **fulltime field/site-based** position in Saskatoon, Saskatchewan requiring increasingly regular and recurring travel to the Wheeler River Project site located in the remote Athabasca Basin as the Project progresses. The successful candidate will possess a valid driver's license to travel to the Project site in a company-issued vehicle, and Denison will provide board, lodging and all required PPE while at the Project site.

Denison offers a competitive compensation and benefits package, including health and dental coverage, life insurance, employee assistance program, bonus program, and a retirement savings plan.

OUR COMMITMENT:

Denison is committed to providing employment opportunities for Indigenous people and members of the communities near where we operate and encourage applicants who are Indigenous and / or residents of those communities to apply and to voluntarily self-identify the appropriate information in their application details.

At Denison, we place a high value on diversity of backgrounds and experience. We strive to create an inclusive workforce that reflects a wide range of cultures, backgrounds, and viewpoints. Our team members are empowered to excel based on their personal merit, qualifications, experience, ability, and job performance. Reasonable accommodations during the hiring process are available upon request. Applicants for this role must be legally eligible to work in Canada.

<i>We thank all applicants for their interest, however only candidates selected for interviews will be contacted.</i>		

OUR COMPANY:

Denison is a uranium exploration and development company listed on the NYSE American and TSX stock exchanges with interests focused in the Athabasca Basin region of northern Saskatchewan, Canada. The Company has an effective 95% interest in its flagship Wheeler River Uranium Project, which is the largest undeveloped uranium project in the infrastructure rich eastern portion of the Athabasca Basin region of northern Saskatchewan. In mid-2023, a Feasibility Study was completed for Wheeler River's Phoenix deposit as an ISR mining operation, and an update to the previously prepared PFS was completed for Wheeler River's Gryphon deposit as a conventional underground mining operation. Based on the respective studies, both deposits have the potential to be competitive with the lowest cost uranium mining operations in the world. Permitting efforts for the planned Phoenix ISR operation commenced in 2019 and have advanced significantly, with licensing in progress and a draft Environmental Impact Statement ('EIS') submitted for regulator and public review October 2022.

Denison's interests in Saskatchewan also include a 22.5% ownership interest in the McClean Lake Joint Venture ('MLJV'), which includes several uranium deposits and the McClean Lake uranium mill, which is contracted to process the ore from the Cigar Lake mine under a toll milling agreement, plus a 25.17% interest in the Midwest Main and Midwest A deposits and a 69.35% interest in the Tthe Heldeth Túé ('THT,' formerly J Zone) and Huskie deposits on the Waterbury Lake property. The Midwest Main, Midwest A, THT and Huskie deposits are located within 20 kilometers of the McClean Lake mill. Taken together, the Company has direct ownership interests in properties covering ~385,000 hectares in the Athabasca Basin region.

Through its 50% ownership of Japan (Canada) Exploration Company, Ltd ('JCU'), Denison holds additional interests in various uranium project joint ventures in Canada, including the Millennium project (JCU, 30.099%), the Kiggavik project (JCU, 33.8118%) and Christie Lake (JCU, 34.4508%).
