

Metallurgical Project Engineer

OUR COMPANY:

Denison Mines Corp. (“Denison”) is a uranium exploration and development company with interests focused in the Athabasca Basin region of northern Saskatchewan. Denison is also engaged in mine decommissioning and environmental services through its Denison Environmental Services division and is the manager of Uranium Participation Corp., a publicly traded company which invests in uranium oxide and uranium hexafluoride.

On September 24, 2018 Denison announced the Prefeasibility Study (PFS) for the Wheeler River Project. The PFS incorporates new and innovative approaches to mining in the Athabasca Basin by adoption of In-situ Recovery (ISR) techniques for the high-grade Phoenix uranium deposit. The selection of ISR mining for the Phoenix deposit is a potentially defining moment for Denison as we work to bring the world’s lowest cost uranium mining method to the jurisdiction hosting the world’s highest-grade uranium deposits. The result is a truly exciting project that has the potential to be the lowest cost uranium mining operation in the world and one of the most environmentally friendly mining operations globally.

With the result of the PFS, Denison is building the project development team and is looking to attract top candidates who want to be a part of our ambitious development story.

THE ROLE:

The key objective of the role of the **Metallurgical Project Engineer** is to provide technical support to the project team for all aspects of mineral processing. You will provide process engineering and technical expertise leadership for various project design phases – including the feasibility study, detailed project engineering, and the environmental assessment processes. Following project approvals, you will provide technical support through the construction phase and through to operations and production. This position will report to the Vice President Project Development.

This role will be based in Saskatoon, Saskatchewan and will require frequent travel to the project site located in the Athabasca Basin.

This role is being offered as a full-time position. All applicants must be eligible to work in Canada. Denison offers a competitive compensation and Benefits Package, including Health and Dental coverage, Life insurance, Employee Assistance program, Bonus program and a Retirement Savings plan.

OUR IDEAL CANDIDATE:

You have a high level of technical knowledge related to mineral processing and are well versed in the latest technological innovations in mineral processing plant design. You have strong leadership and management skills with a demonstrated ability to work in a team environment. You are a well-rounded candidate with a solid track record of success and overcoming challenges in your career. In addition, you have:

- Engineering degree in metallurgy, mineral processing or related field of study;
- Minimum of 10 years practical experience with both projects and operational background;
- Experience in uranium industry is strongly preferred;
- Experience in managing budgets, schedules, scope, issue escalation and other project management skills in a consulting or contracting environment;
- Strong understanding of the importance of health and safety and environmental sustainability;
- Demonstrated communication skills including the ability to write clear and concise reports and the ability to present technical information in an understandable format to non-technical audiences.

Metallurgical Project Engineer

YOUR RESPONSIBILITIES:

- Provide technical leadership for the designs of mineral processing applications, including uranium processing, water treatment, and other operational processes;
- Develop and co-ordinate laboratory testing programs as required;
- Prepare technical reports, budgets and other presentations;
- Prepare procurement documents;
- Collaborate and work effectively with internal departments including: Environment, Safety, HR, Accounting, Procurement, Investor relations and other functional groups;
- Liaise with external groups such as consultants and contractors as required.

Interested applicants should submit their resume with cover letter to jobs.sk@denisonmines.com. All applicants must be eligible to work in Canada. Please include the job title for which you are applying in the subject line of your email application. We thank all applicants for their interest; however, only those candidates selected for interviews will be contacted.
