

Environmental Coordinator

OUR COMPANY:

Denison Mines Corp. (“Denison”) is a uranium exploration and development company with interests focused in the Athabasca Basin region of northern Saskatchewan. Denison is also engaged in mine decommissioning and environmental services through its Denison Environmental Services division and is the manager of Uranium Participation Corp., a publicly traded company which invests in uranium oxide and uranium hexafluoride.

On September 24, 2018 Denison announced the Prefeasibility Study (PFS) for the Wheeler River Project. The PFS incorporates new and innovative approaches to mining in the Athabasca Basin by adoption of In-situ Recovery (ISR) techniques for the high-grade Phoenix uranium deposit. The selection of ISR mining for the Phoenix deposit is a potentially defining moment for Denison as we work to bring the world’s lowest cost uranium mining method to the jurisdiction hosting the world’s highest-grade uranium deposits. The result is a truly exciting project that has the potential to be the lowest cost uranium mining operation in the world and one of the most environmentally friendly mining operations globally.

On June 3, 2019 Denison announced the initiation of the environmental impact assessment (EIA) process for the Wheeler River Project. A joint federal-provincial EIA will be conducted. A successful EIA process is critical to securing the approvals necessary to develop and operate a mine in Canada.

Denison is building the Wheeler project development team and is looking to attract top candidates who want to be a part of our ambitious development story.

THE ROLE:

The **Environmental Coordinator** will provide technical support to the project team as the environmental impact assessment process advances for the Wheeler River Project. The work will include data management, coordination of environmental baseline programs, and support for the environmental assessment process. This position will report to the Environment Manager.

This role will be based in Saskatoon, Saskatchewan and will require travel to the Wheeler River Project site located in northern Saskatchewan.

This role is being offered as a full-time position. All applicants must be eligible to work in Canada. Denison offers a competitive compensation and Benefits Package, including Health and Dental coverage, Life insurance, Employee Assistance program, Bonus program and a Retirement Savings plan.

OUR IDEAL CANDIDATE:

You are a self-starter and creative problem solver. While you have strong technical skills in your area of expertise, you function well as a generalist and can think holistically about potential effects of project activities on the environment. You are logical, pragmatic and thorough while also being flexible and innovative. You are a well-rounded candidate with good organizational skills, a strong sense of responsibility and demonstrated ability to work in a team environment. In addition, you have:

- B.Sc. in Biology, Environmental Science (or equivalent) from a recognized post-secondary institution.
- A minimum of 3-5 years of relevant work experience (e.g., in resource industry, environmental consulting or studies related to the aquatic, terrestrial, atmospheric, and/or hydrogeological environment); experience in the uranium industry is highly desired.
- An understanding of environmental impact assessment process with:
 - Direct work experience on a recent environmental impact assessment,
 - Familiarity on meaningful incorporation of Indigenous Knowledge into environmental impact assessments, and

Environmental Coordinator

- A general understanding of mining and mineral processing concepts, and a basic understanding of feasibility studies.
- Working knowledge of provincial and federal environmental legislation.
- Experience with ArcGIS or other spatial mapping tools would be considered an asset.
- A commitment to Health and Safety as well as environmental sustainability.
- Excellent communication skills including the ability to write clear and concise reports and to present technical information in an understandable format to non-technical audiences.

YOUR RESPONSIBILITIES:

- Coordinate ongoing environmental baseline data collection programs and lead internal data management.
- Provide field support for environmental baseline programs, as required.
- Assist in drafting the Wheeler River Project environmental impact statement.
- Liaise and coordinate with external environmental consultants on both baseline data collection and the environmental impact assessment, as required.
- Research and write reports on various environmental topics of relevance to Wheeler River Project development.
- Provide technical support for community engagement events.
- Support Indigenous Knowledge collection and meaningful integration into various aspects of the Wheeler River Project.
- Contribute to the establishment of an Environmental Management System.

Interested applicants should submit their resume with cover letter to jobs.sk@denisonmines.com. All applicants must be eligible to work in Canada. Please include the job title for which you are applying in the subject line of your email application. We thank all applicants for their interest; however, only those candidates selected for interviews will be contacted.
