# Cautionary Statements & References

This presentation and the information contained herein is designed to help you understand management's current views, and may not be appropriate for other purposes. This presentation contains third-party information, such as the uranium market, other issuers, provincial and federal infrastructure and regulations, etc., derived from third-party publications and reports which Denison believes are reliable but have not been independently verified by the Company.

**Certain information contained in this presentation constitutes "forward-looking information", within the meaning of the United States Private Securities Litigation Reform Act of 1995 and similar Canadian legislation concerning the business, operations and financial performance and condition of Denison.** Generally, these forward-looking statements can be identified by the use of forward-looking terminology such as "plans", "expects", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "believes", or the negatives and / or variations of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will be taken", "occur", "be achieved" or "has the potential to". In particular, this presentation contains forward-looking information pertaining to the results of, and estimates, assumptions and projections provided in, the 2023 Phoenix feasibility study ("Phoenix FS"), the 2023 Gryphon PFS Update ("Gryphon PFS Update") and the Waterbury PEA, including future development methods and plans, market prices, costs and capital expenditures; de-risking and project assessment activities, plans and objectives; assumptions regarding Denison's ability to obtain all necessary regulatory approvals to commence development at Wheeler River; Denison's percentage interest in its projects and assumed continuity of its agreements with its joint venture partners and other third parties; production and SABRE development outlook for McClean Lake; and estimates of uranium industry factors, including physical uranium supply and demand. Statements relating to "mineral resources" are deemed to be forward-looking information, as they involve the implied assessment, based on certain estimates and assumptions that the mineral resources described can be profitably produced in the future.

**Forward looking statements are based on the opinions and estimates of management as of the date such statements are made, and they are subject to known and unknown risks, uncertainties and other factors that may cause the actual results, level of activity, performance or achievements of Denison to be materially different from those expressed or implied by such forward-looking statements.** Denison faces certain risks, including the proposed use of mining methods which are novel and untested in the Athabasca basin, the inability to permit or develop its projects as currently planned, the inability to secure sufficient financing to pursue its business objectives, the unpredictability of market prices, events that could materially increase costs, changes in the regulatory environment governing the project lands, and unanticipated claims against title and rights to the project. Denison believes that the expectations reflected in this forward-looking information are reasonable but there can be no assurance that such statements will prove to be accurate and may differ materially from those anticipated in this forward looking information. For a discussion in respect of risks and other factors that could influence forward-looking events, please refer to the "Risk Factors" in the Company's Annual Information Form dated March 28, 2025 ("AIF") available on SEDAR+ at [www.sedarplus.ca](http://www.sedarplus.ca) and on EDGAR at [www.sec.gov/edgar](http://www.sec.gov/edgar). These factors are not, and should not be construed as being, exhaustive.

**Readers should not place undue reliance on forward-looking statements.** The forward-looking information contained in this presentation is expressly qualified by this cautionary statement. Any forward-looking information and the assumptions made with respect thereto speaks only to the effective date of this presentation. Denison does not undertake any obligation to publicly update or revise any forward-looking information after such date to conform such information to actual results or to changes in its expectations except as otherwise required by applicable legislation.

**Cautionary Note to United States Investors Concerning Estimates of Mineral Resources and Mineral Reserves:** This presentation may use terms such as "measured", "indicated" and/or "inferred" mineral resources and "proven" or "probable" mineral reserves, which are terms defined with reference to the guidelines set out in the Canadian Institute of Mining, Metallurgy and Petroleum ("CIM") CIM Definition Standards on Mineral Resources and Mineral Reserves ("CIM Standards"). The Company's descriptions of its projects may not be comparable to similar information made public by U.S. companies subject to the reporting and disclosure requirements under the United States federal securities laws and the rules and regulations thereunder.

## Qualified Persons

The disclosure of a scientific or technical nature within this presentation, including the disclosure of mineral resources, mineral reserves, and the results of the Phoenix FS, Gryphon PFS Update and Waterbury PEA, was reviewed and approved by Chad Sorba, P.Geo, Vice President Technical Services & Project Evaluation, a Qualified Person in accordance with the requirements of NI 43-101.

## Technical Reports

- For further details regarding the **Wheeler River project**, please refer to the Company's press release dated June 26, 2023 announcing the results of the Phoenix FS and Gryphon PFS Update and the technical report titled "*NI 43-101 Technical Report on the Wheeler River Project, Athabasca Basin, Saskatchewan, Canada*" with an effective date of June 23, 2023 ("Wheeler River Technical Report").
- For further details regarding the **Waterbury Lake project**, please refer to the Company's press release dated November 17, 2020 and the technical report titled "*Preliminary Economic Assessment for the Tthe Heldeth Túé (J Zone) Deposit, Waterbury Lake Property, Northern Saskatchewan, Canada*" with an effective date of October 30, 2020 ("Waterbury PEA"). **The PEA is a preliminary analysis of the potential viability of the Project's mineral resources, and should not be considered the same as a Pre-Feasibility or Feasibility Study, as various factors are preliminary in nature.** The PEA includes inferred mineral resources that are considered too speculative geologically to have the economic considerations applied to them that would enable them to be categorized as mineral reserves, and there is no certainty that the preliminary economic assessment will be realized. **Mineral resources are not mineral reserves and do not have demonstrated economic viability. Scheduled tonnes and grade do not represent an estimate of mineral reserves.**

For a description of the data verification, assay procedures and the quality assurance program and quality control measures applied by Denison, please see Denison's AIF. A copy of the foregoing is available on Denison's website and under its profile on SEDAR+ and on EDGAR.

# **Key Investment Highlights<sup>(1)</sup>:**

Advanced Athabasca Basin uranium developer with unique asset mix

## **Three low-cost uranium development projects operated by Denison**

Phoenix, Gryphon, and THT/Waterbury all projected within UxC's "First Tier" of global assets

**#1**

## **Phoenix combines lowest-cost mining method with Athabasca Basin high-grades**

Ranked #1 mining development project globally in 2024 by Mining Journal Intelligence

Flagship ISR project with final federal Environmental Impact Statement accepted by CNSC

Technical de-risking completed, with detailed design engineering and long-lead procurement in progress

First production targeted by the first half of 2028

## **Interest in strategic regional asset with McClean Lake mill and mine**

Excess licensed milling capacity with approval for expanded tailings management facility

Announced 2025 mining restart at McClean Lake North deposit by Orano Canada

## **High-potential exploration portfolio and interests in key mines / projects operated by "majors"**

Large exploration portfolio, including Moon Lake South and Johnston Lake properties

Minority interests in Orano-Denison Midwest Joint Venture & Cameco-JCU's Millennium project

## **Strong balance sheet with ~CAD\$310M in cash, physical uranium and investments<sup>(2)</sup>**

Denison's financial and liquid assets on hand, relative to flagship development project initial capex (~\$CAD400M)<sup>(3)</sup> is unrivaled and puts the company in an enviable position for project advancement

## **Focused on the infrastructure-rich Eastern Athabasca Basin in Saskatchewan, Canada**

## **Nuclear renaissance: 30+ nations pledge to triple nuclear energy capacity by 2050**

PHOTO:

Pre-tax IRR <sup>(2)(6)</sup>	<b>106%</b>

## 2023 Phoenix Feasibility Study

Provides excellent basis for detailed engineering design efforts to support a future final investment decision

# Phoenix ISR De-Risking:

Combining the world's lowest-cost uranium mining method with one of the world's highest-grade undeveloped uranium deposits

## 2019/2020 ISR Field Tests<sup>(1)</sup>

35 small-diameter test, observation and recharge wells

2 large-diameter commercial scale wells

Pump and injection tests collecting critical hydrogeological data

Demonstrated "Proof of Concept" for use of ISR

## Specialized Core Leach Testing

Leach testing indicative of in-situ conditions using intact core samples from Phoenix

Results consistently produced uranium bearing solution head-grade levels significantly higher than grade used in the 2018 PFS<sup>(2)</sup>

**+97%** recovery achieved during long-term test<sup>(3)</sup>

## Additional High-Grade uranium discovered at Phoenix<sup>(4)</sup>

**22.0% eU<sub>3</sub>O<sub>8</sub>**  
over 8.6 metres in GWR-045

Located outside of the existing high-grade resource domain for Zone A and Phase 1 of the current mining plan

## 2021 field test of commercial-scale ISR test pattern<sup>(5)</sup>

Achieved commercial-scale flow-rate used in the 2018 PFS

Completed Athabasca Basin's first "tracer test" showing hydraulic control, breakthrough times consistent with modelling, and ability to carry out "clean-up"

PHOTOS (Left to Right):

Small diameter ISR test wells installed at Phoenix in 2019; Specialized core-leach testing apparatus from the Saskatchewan Research Council (SRC); high-grade uranium core and scintillometer; monitoring of commercial scale ISR test wells at Phoenix in 2021.

# Fully Permitted In-Situ Recovery Feasibility Field Test (FFT): Highly successful first-of-its-kind test in the Athabasca Basin<sup>(1, 2)</sup>

**The Phoenix FFT** was designed to validate and inform various Feasibility Study (FS) elements for use of **In-Situ Recovery (ISR)** mining, including production and remediation profiles, and is planned to occur in three phases. The first two phases supported the 2023 Phoenix FS.

## Leaching

Completed ✓  
successful injection  
of acidic solution  
and recovery of  
uranium bearing  
solution using a  
portion of the test  
pattern installed at  
Phoenix in 2021<sup>(3)</sup>.

## Neutralization

Completed ✓  
successful  
injection of mild  
alkaline solution to  
reverse the  
leaching process  
and return test  
area to protective  
conditions<sup>(4)</sup>.

## Recovered Solution Management

Completed  
compliance  
phase to separate  
recovered solution into  
mineralized precipitates  
(temporarily stored on  
site) and neutralized  
treated solution (injected  
into sub-surface)<sup>(5)</sup>.

(2) See Denison's news release dated January 19, 2022.

(3) Denison monetized its share of tolling revenues from the Cigar Lake toll milling agreement. See Denison's news releases dated February 1, 2017 and February 13, 2017. Please also refer to Denison's current Annual Information Form and Financial Statements and Management, Discussion and Analysis for additional details related to the toll milling agreement.

(4) See Denison's current Annual Information Form for additional details regarding the McClean Lake mill facility.

## 22.5% Denison-owned McClean Lake Mine: SABRE mining method has potential to unlock value from unmined deposits close to mill

### SABRE Patented & Tested

Successful 5-year test mining program for "Surface Access Borehole Resource Extraction" (SABRE) mining method

SABRE is property of McClean Lake JV with patent issued in 2016

Produced ~1,500 tonnes of high-value ore from McClean Lake North in 2021<sup>(1)</sup>

### 2024 Activities

Completion of the Pod 1 East SABRE pad, drilling and installation of four access holes for Pod 1 East and associated procurement<sup>(4)</sup>

## 2025 Restart of Mining

Orano Canada, operator of McClean Lake Mine is targeting production from McClean North in **mid 2025<sup>(2)</sup>**

**17.8M**

**Ibs U<sub>3</sub>O<sub>8</sub>**

NOTES:  
(1) Refer to the Waterbury Lake Technical Report titled "Preliminary Economic Assessment for the Tthe Heldeth Túé (J Zone) Deposit, Waterbury Lake Property, Northern Saskatchewan, Canada" and dated October 30, 2020.

(2) The PEA is a preliminary analysis of the potential viability of the Project's mineral resources and should not be considered the same as a Pre-Feasibility or Feasibility Study, as various factors are preliminary in nature. There is no certainty that the results from the PEA will be realized. Mineral resources are not mineral reserves and do not have demonstrated economic viability.

(3) See Denison's news release dated Nov. 6, 2023

# The Heldeth Túé (“THT”) ISR Operation: PEA (2020) shows potential for ISR to change uranium mining landscape in Canada<sup>(1)</sup>

**1.6M lbs**  
**lbs U<sub>3</sub>O<sub>8</sub>**

## PHOTOS:

Aerial rendering of surface facilities for the THT ISR operation

## NOTES:

(1) Refer to the Waterbury Lake Technical Report titled “Preliminary Economic Assessment for the Tthe Heldeth Túé (J Zone) Deposit, Waterbury Lake Property, Northern Saskatchewan, Canada” dated October 30, 2020.

(2) All-in cost is estimated on a pre-tax basis and includes all project operating costs and capital costs divided by the estimated number of finished pounds U<sub>3</sub>O<sub>8</sub> produced.

(3) NPV and IRR are calculated based on assessed “high-case” uranium price, to the start of pre-production activities.

(4) Post-tax NPV attributable to Denison’s then 66.90% interest is estimated to be between \$72 million (base-case) and \$109 million (\$65/lb high-case).

(5) Post-tax IRR attributable to Denison’s then 66.90% interest is estimated to be between 30.4% (base-case) and 38.9% (\$65/lb high-case).

# 25.17% Denison-owned Midwest Property: Two high-grade uranium deposits in close proximity to the McClean Lake mill

## Approved Environmental Impact Statement ("EIS")

Despite deferral of development decision in 2008, EIS approval efforts continued with assessment of open pit mining method and processing at McClean Lake

CNSC approved final EIS in 2012<sup>(1)</sup>

## 25km from McClean Lake mill

Via existing roads, and only 1km from the Points North airstrip

## 2024 ISR Field Test<sup>(3)</sup>

Results suggest Midwest Main deposit possesses characteristics needed for ISR mining.

[ISR evaluation efforts advancing to PEA](#)

## Orano

Canada Inc.

French nuclear giant serves as project operator and is owner of 74.83% interest

PHOTO:

Aerial view of Midwest Project.

NOTES:

(1) See Denison's current Annual Information Form for additional details regarding the Midwest project.

(2) Refer to the Midwest Technical Report titled "Technical Report with an Updated Mineral Resource Estimate for the Midwest Property, Northern Saskatchewan, Canada" and dated March 26, 2018. Mineral resource figures shown on a 100% basis.

(3) See Denison's news release dated June 3, 2024.

## Midwest Main deposit<sup>(2)</sup>

**39.9M lbs U<sub>3</sub>O<sub>8</sub>**  
(453,000 tonnes @ 4.0% U<sub>3</sub>O<sub>8</sub>) in Indicated Mineral Resources

**11.5M lbs U<sub>3</sub>O<sub>8</sub>**  
(793,000 tonnes @ 0.66% U<sub>3</sub>O<sub>8</sub>) in Inferred Mineral Resources

## Midwest "A" deposit<sup>(2)</sup>

**10.8M lbs U<sub>3</sub>O<sub>8</sub>**  
(566,000 tonnes @ 0.87% U<sub>3</sub>O<sub>8</sub>) in Indicated Mineral Resources

**6.7M lbs U<sub>3</sub>O<sub>8</sub>**  
(53,000 tonnes @ 5.8% U<sub>3</sub>O<sub>8</sub>) in Inferred Mineral Resources

# Environmental, Social, Governance & Indigenous (ESG+I)

## Fundamental considerations driving Denison's operations

### Multiple Indigenous Agreements

- Shared Prosperity Agreement with English River First Nation<sup>(4)</sup>
- Mutual Benefits and Community Benefit Agreements with Kineepik Métis Local #9 and the Village of Pinehouse<sup>(5)</sup>
- Participation/Funding and/or Exploration Agreements Ya'thi Néné Lands & Resources Office<sup>(6)</sup> and Métis Nation – Saskatchewan<sup>(7)</sup>

### Comprehensive ESG Reporting

Designed to address GRI, SASB, TCFD and other global disclosure frameworks

### Board approved Indigenous Peoples Policy

First-in-sector policy reflecting Denison's commitment to take action towards advancing reconciliation with Indigenous peoples in Canada<sup>(1)</sup>

### Strong EHS&S Culture & Results

One lost time injury across all operations and no significant environmental events for 2024<sup>(8)</sup>

### Top 115 in Canada Leading Governance Practices & Disclosure

Denison recognized by Globe & Mail "Board Games" as **top uranium developer** for corporate governance practices & disclosure in its assessment of leading companies and trusts included in Canada's benchmark S&P/TSX Composite Index<sup>(2, 3)</sup>

### Authentic Social Programs

Denison's community / social investment program targets community-based initiatives

PHOTO:  
Highlights of the Elders of Sakitawak's market garden in Ile a la Crosse, a community-based initiative sponsored by Denison.

# The Uranium Investment Thesis: Growing supply deficit → higher prices required to incent new supply

## Key Market Themes:

- Draw down of surplus inventories during period of production curtailments led transition to production-cost focused market
- First phase of supply response from incumbent producers insufficient to meet demand projections
- Market entering period of projected sustained structural supply shortage, with mine production deficit in 2024 estimated at ~20% of demand
- Geopolitical events highlighting importance of reliable / western sources of supply
- Demand yet to factor in significant small modular reactors (SMRs) growth, despite progress towards deployment for the late 2020s<sup>(2)</sup>
- Potentially significant increase in demand growth on the horizon with commitment of 30+ countries at COP29 to triple nuclear power capacity by 2050

NOTES: (1) Data in this slide has been derived from UxC's Uranium Market Outlook dated Q1'2025, including supply & demand estimates and market balance figures.  
(2) OPG projects completion of SMR at Darlington by 2028 ([LINK](#)).

<b>Tot. Historic Inferred Resources</b>	<b>1,145,400</b>		<b>34,400</b>	<b>5,300</b>

NOTES: (1) See AIF for details for further details, including cut-off grades used for mineral reserve and mineral resource estimates. CIM definitions were followed for classification of mineral reserves and mineral resources. Mineral resources are not mineral reserves and do not have demonstrated economic viability. (2) Mineral reserves are estimated at a cut-off grade of 0.5% U<sub>3</sub>O<sub>8</sub> based on the ISR mining method, using a long-term uranium price of US\$50/lb U<sub>3</sub>O<sub>8</sub> and a CA\$/US\$ exchange rate of 1.33. The mineral reserves are based on a mine operating cost of \$0.78/lb U<sub>3</sub>O<sub>8</sub>, process operating cost of \$5.20/lb U<sub>3</sub>O<sub>8</sub>, and process recovery of 99%. The effective date of the mineral reserve estimate is June 23, 2023. A mine recovery of 80.6% has been applied to convert the mineral resources to mineral reserves. Recoverable U<sub>3</sub>O<sub>8</sub> refers to ISR recoverable and does not account for process losses. (3) The effective date of the mineral reserves is September 1, 2018. Mineral reserves for the Gryphon deposit are estimated at a cut-off grade of 0.58% U<sub>3</sub>O<sub>8</sub> based on longhole mining using a long-term uranium price of US\$50/lb and a US\$/CA\$ exchange rate of 0.8. The mineral reserves are based on a mine operating cost of \$150/t, mill operating cost of \$275/t, G&A cost of \$99/t, transportation cost of \$50/t, milling recovery of 97%, and 7.25% fee for Saskatchewan royalties. Mineral reserves include for diluting material and mining losses. (4) Mineral reserves are stated at a processing plant feed reference point and include diluting material and mining losses. (5) Measured & Indicated mineral resources for Phoenix and Gryphon deposits are inclusive of mineral reserves. (6) As at December 31, 2024, pursuant to the terms of the agreements with its applicable joint venture partners, the Company had an effective 95.00% interest in the Wheeler River project, a 22.50% interest in the McClean Lake property; a 25.17% interest in the Midwest project; and a 70.32% interest in the Waterbury Lake property. (7) Denison's share has been calculated as 50% of the product of JCU's percentage interest in the applicable project multiplied by the estimated mineral resources on a 100% basis. (8) Numbers may not add due to rounding. (9) See AIF for all details of mineral reserves and mineral resources, including historical estimates.
