

Asset Geologist

Denison is redefining mining by **Powering People, Partnerships and Passion**. We are trailblazers in uranium mining, adopting an innovative climate positive approach to mining by deploying ISR methods and building durable partnerships with Indigenous groups in northern Saskatchewan. As a *Certified™ Great Place to Work®*, our success is fuelled by empowering employees with engaging work, unique development opportunities, and lucrative rewards – resulting in an exceptionally talented, diverse, and motivated team throughout all levels of the organization. Flexible and agile thinking ensures our workplace is one where talent thrives, innovation flourishes, and people have fun leveraging their passions to create powerful partnerships and positive results.

THE ROLE:

The **Asset Geologist** leads and provides technical oversight for geological data collection and evaluation during Freeze Well (diamond) and ISR (mud-rotary) drilling at the Wheeler River Operation. When drilling is inactive, the role supports wellfield operations, long-term development planning, and future drilling programs for the Phoenix Deposit.

Reporting to the Wellfield Manager, the **Asset Geologist** promotes a strong safety culture while overseeing drill programs, database management, QAQC, and production tracking. Responsibilities include short- and medium-term drill scheduling, ensuring compliance with wellfield design, upgrading grade control models, optimizing production, and reconciling mining results. The role also manages sampling programs, validates production data, coordinates with other departments to optimize mine-to mill grade, and oversees personnel, safety coordination, and training.

This position is site based at the Wheeler River site on a two-week rotational schedule.

OUR IDEAL CANDIDATE:

The **Asset Geologist** brings hands-on wellsite geological experience with both mud-rotary and diamond drilling techniques. As a detail-oriented team player who excels in dynamic environments, the **Asset Geologist** ensures quality and technical requirements are met while drilling operations are occurring, while adhering to environmental regulations and operational standards. Additional qualifications and attributes include:

- Bachelor's degree in Geology, or Geological Engineering.
- A minimum of 3+ years in field geology with strong geological and structural mapping skills from mineral exploration, or mine geology background.
- Solid proficiency with office productivity software, including Microsoft Office Suite, accompanied by a willingness to learn and use other technologies and software as required.
- Proficiency with SAP, Computerized Maintenance Management (CMMS) and SCADA systems would be an asset.
- Willingness and ability to train and mentor wellsite geologists and geological technicians.
- Ability to lift, climb, and perform maintenance tasks as required.
- Strong organizational skills with a keen eye for detail and the ability to prioritize tasks and manage multiple responsibilities efficiently and effectively.
- Strong interpersonal skills that promote safe, collaborative, and inclusive relationships with colleagues, vendors, and contractors.
- Demonstrates a commitment to continuous improvement through openness to new ideas and alternative approaches, supporting effective performance in a dynamic, evolving environment.
- Demonstrated ability to think critically to effectively evaluate and resolve complex problems.
- Possession of a Drivers' License that is valid and in good standing is required.
- An uncompromising commitment to always working safely; ability to wear and use personal protective equipment (PPE) as required and assigned.

YOUR RESPONSIBILITIES:

- Support execution of freeze and wellfield drilling and completion programs in accordance with sampling, probing, and design criteria.
- Monitor geological horizons while drilling; completion/stimulation intervals.
- Log and manage mineralized core, samples, and assays; utilize drilling data to confirm targets and identify amounts.
- Provide technical support to the Wellfield Manager, drilling supervisors, and crews, including troubleshooting and QA/QC oversight.
- Contribute to drilling and completions program design, wellfield development, planning, and updates to grade control models and production forecasts.
- Prepare and review engineering documents, drawings, change notices, procedures, and production designs.
- Liaise with site and corporate technical teams to support wellfield operations and production reporting.
- Provide geological input on well performance, workovers, and stimulation activities.
- Perform inspections on job/task observations to ensure compliance with health, safety, environmental, and regulatory requirements.

TO APPLY:

To submit your resume and cover letter, please **EMAIL:** jobs@denisonmines.com

We appreciate the interest of all applicants; however, only those selected for interviews will be contacted.

All applicants must be eligible to work in Canada. Denison offers a competitive compensation and benefits package, including health and dental coverage, and a retirement savings plan.

OUR COMMITMENT:

Denison is dedicated to creating employment opportunities for Indigenous individuals and residents of the communities in which we operate. We encourage Indigenous applicants and those from these communities to apply and to voluntarily provide relevant information in their application. Preference will be given to qualified Indigenous candidates.

At Denison, we place a high value on diversity of backgrounds and experience. We strive to create an inclusive workforce that reflects a wide range of cultures, backgrounds, and viewpoints. Our team members are empowered to excel based on their personal merit, qualifications, experience, ability, and job performance. Reasonable accommodation during the hiring process is available upon request.

OUR COMPANY:

Denison Mines is a publicly traded company and a Certified Great Place to Work® with a 70-year legacy of uranium mining, exploration, and development in Canada. The company has an effective 95% interest in its flagship Wheeler River Project, which is the largest undeveloped uranium project in the eastern portion of the prolific Athabasca Basin region of northern Saskatchewan. Denison also owns interests in the McClean Lake uranium mines and mill, the Midwest project and the Waterbury Lake project. Collectively, Denison has a project portfolio covering ~385,000 hectares in northern Saskatchewan. For more information visit our website at www.denisonmines.com.
